# Turning on Security in Windows 10
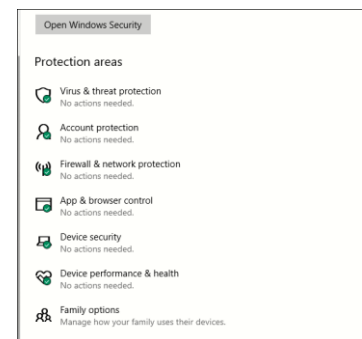

1. Press **Wins** key + **I**
   *(Settings will open.)*

2. Click on the **Update & Security** icon.
   *(Locate **Windows Security** category)*

  click items on **right**

3. Click **Windows Security** category.
   (If you scroll down the page you will find links to learn more about keeping your PC safe.)

4. At the top of the page, click the Open **Windows Security** button.

   *If everything has a green circle with a check mark you are good.*

5. If not click **Virus & threat protection** category on the left.
6. Click **Manage settings** link on the right.

7. Turn on **Real-time protection** and **Cloud-delivered protection**. [toggle: On]

8. Click the **back arrow** [Windows Security ←] in the top left corner of the dialog window.

9. At this point you can do a **Quick scan** if you like, by clicking the Quick scan button.

   [Quick scan]

The next category is Account protection. This will tell you what account your computer uses to sign in and manage everything about your PC in relation to your Microsoft account.

Firewall & network protection is the third category. Here you would want to make sure you have Domain network, Private network and Public network turned on.

I would also suggest that you take a moment to watch a short 2 minute video on Firewall protection created by Microsoft.

The link to the video is located at the top right corner of the Firewall & network protection section.
